

ZEHRA TUNCER

JUNIOR FULL-STACK ENGINEER | COMPUTER ENGINEERING STUDENT

PROFESSIONAL SUMMARY

As a Computer Engineering student, I have experience in applied software development with C#, .NET 9, ASP.NET Core Web API, PostgreSQL, Angular, and Clean Architecture technologies. During my internship at TOFAŞ Information Technologies, I contributed to the backend and full-stack development processes of corporate document and dealer management systems. I am also conducting a computer vision project on eye tracking and visual attention analysis using Python, OpenCV, and MediaPipe under the TÜBİTAK 2209-A program. I am interested in backend development, scalable software architectures, and AI-powered applications.

PROFESSIONAL EXPERIENCE

TOFAŞ TÜRK OTOMOBİL FABRİKASI A.Ş. — IT / Software Development Intern

Bursa, Türkiye | 2026

Corporate Dealer Document & Announcement Management Portal

- I contributed to the development process of a corporate document and announcement management portal developed using .NET 9, ASP.NET Core Web API, PostgreSQL, and Clean Architecture.
- I developed backend components in accordance with Modular Monolith architecture principles.
- I developed JWT Authentication and Role-Based Authorization (RBAC) structures for dealer and brand-based access control.
- I contributed to a dynamic authorization mechanism that isolates data and transactions according to dealer and brand permissions.
- I ensured that document contents were separated from the database and managed in an independent file storage structure. I contributed to the Audit Logging infrastructure for traceability of user logins and document access.

VaultCore — Metadata-Driven Document Management & Workflow System

- I developed a metadata-driven document management and workflow system, integrating a runtime-definable schema structure with a PostgreSQL JSONB-based object model.
- I contributed to the development of a workflow structure that includes object-level authorization, document locking, electronic approval, state transitions, and SLA tracking features.
- I implemented SHA-256 Content-Addressable Storage, PostgreSQL full-text search, and Tesseract OCR integrations.
- And contributed to many other improvements.

RESEARCH AND PROJECTS

TÜBİTAK 2209-A — Eye Tracking & Neuromarketing Heat Map Analysis System

Project Leader / Researcher | 2026

- Technology:** Python, OpenCV, MediaPipe, Computer Vision, Data Analysis
- I am developing a Computer Vision system that detects eye movements and visual focus points from a standard webcam image.
- I am performing real-time gaze tracking and visual attention analysis using MediaPipe and OpenCV, and developing heatmap methods to analyze attention regions.

BeYourself — Mobile Inspiration & Media Assistant

Project Leader | 2026

- Technology:** Flutter, Riverpod, Supabase, Vercel Serverless API
- I developed a Flutter-based personalized inspiration and media management application; integrated state management with Riverpod and backend services with Supabase.
- I developed media parsing, Vercel Serverless CORS proxy, AndroidHome Widget, and scheduled local notification features.

COMMUNITY ACTIVITIES

Fİ-TECH (Fikir ve Teknoloji Kulübü)

Co-Founder / Vice President

I was involved in the establishment and management processes of a technology-focused student community within the university; I contributed to the planning of software workshops and technology events.

Address: Bursa/Mudanya

EDUCATION

MUDANYA UNIVERSITY -
COMPUTER ENGINEERING

BURSA, Türkiye | 2024-2028

3rd Year Student

GPA: 3.37 / 4.00

TECHNICAL SKILLS

- Languages:** C#, Python, Java, C++, C
- Backend:** .NET 9, ASP.NET Core Web API, REST API, Entity Framework Core
- Database:** PostgreSQL, SQL, JSONB
- Architecture:** Clean Architecture, Modular Monolith, REST, SOLID
- Authentication & Authorization:** JWT, RBAC, Role-Based Authorization
- Frontend:** Angular, Flutter
- Tools:** Git, Docker, Swagger/OpenAPI
- AI / Computer Vision:** Python, OpenCV, MediaPipe, Tesseract OCR

LANGUAGES

TURKISH: Native language ENGLISH: B1
